

# Intel<sup>®</sup> Firmware Support Package (Intel<sup>®</sup> FSP) for Intel Atom<sup>®</sup> Processor C2000 Product Family for Communications Infrastructure Post-Gold 6

Release Notes

---

*April 2017*

You may not use or facilitate the use of this document in connection with any infringement or other legal analysis concerning Intel products described herein. You agree to grant Intel a non-exclusive, royalty-free license to any patent claim thereafter drafted which includes subject matter disclosed herein.

No license (express or implied, by estoppel or otherwise) to any intellectual property rights is granted by this document.

All information provided here is subject to change without notice. Contact your Intel representative to obtain the latest Intel product specifications and roadmaps.

The products described may contain design defects or errors known as errata which may cause the product to deviate from published specifications. Current characterized errata are available on request.

Copies of documents which have an order number and are referenced in this document may be obtained by calling 1-800-548-4725 or by visiting: <http://www.intel.com/design/literature.htm>.

Intel technologies' features and benefits depend on system configuration and may require enabled hardware, software or service activation. Learn more at <http://www.intel.com/> or from the OEM or retailer.

No computer system can be absolutely secure.

Intel, Atom, and the Intel logo are trademarks of Intel Corporation in the U.S. and/or other countries.

## 1.0 Introduction

This package contains the required binary image(s) and collateral for the Intel® Firmware Support Package (Intel® FSP) for Intel® Atom™ Processor C2000 Product Family for Communications Infrastructure Post-Gold 6.

This document provides system requirements, installation instructions, issues and limitations, and legal information.

To learn more about this product, see:

- New features listed in [Section 2.0 “New in This Release”](#), or in the help.
- Reference documentation listed in [Section 4.0 “Related Documentation, Tools, and Packages”](#) below.
- Installation instructions listed in [Section 5.1 “How to Install this Release”](#) below.

## 1.1 Component Information

The software in this release has been developed and validated using the following in [Table 1](#).

**Table 1. Intel® FSP Component Information**

FSP Binary Version	Post-Gold 6
Reference Code Version	49.R00
Memory Reference Code Version	1.0.0.49
Microcode Update C2xx0 A1	M01406D000E
Microcode Update C2xx0 B0	M01406D8129

## 1.2 Limitations

The following are the limitations for the Intel® FSP:

- The serial console base address of Intel® Atom™ Processor C2000 Product Family FSP is 0x2F8.
- The boot loader must ensure that FspInitEntry Application Programming Interface (API) is called within one second of returning from TempRamInitEntry API. Intel® FSP for Intel Atom® Processor C2000 Post-Gold 6.

## 1.3 Acronyms and Terms

Table 2 shows the acronyms and terms used in this document (arranged in alphabetic order).

**Table 2. Acronyms and Terms**

Acronym/Term	Description
API	Application Programming Interface
BCT	Binary Configuration Tool
BSF	Binary Settings File
CRB	Customer Reference Board
FSP	Firmware Support Package
IBL	Intel® Business Link
RMT	Rank Margining Tool
SoC	System on a Chip
UPD	Updatable Product Data
VPD	Vital Product Data

## 1.4 Intended Audience

Platform and system developers who intend to use an Intel® Firmware Support Package-based boot loader for the firmware solution for their overall design based on the Intel® Atom™ Processor C2000 Product Family. This group includes, but is not limited to, system BIOS developers, boot loader developers, and system integrators.

## 1.5 Customer Support

Intel offers support for this software at the API level only, defined in the FSP Integration guide and reference manuals listed in [Section 4.0 “Related Documentation, Tools, and Packages”](#). If your field representative has created an account for you, support requests can be submitted at <https://premier.intel.com>.

## 2.0 New in This Release

---

### 2.1 New Features

This release includes the following new features and product changes:

- Updated platform reference code to Reference Code Release (49.R00)
- Updated USB Workaround for detection issue found in certain configurations.

§ §

## 3.0 Known Issues

Known and resolved issues relating to Intel® Firmware Support Package are described in this section.

### 3.1 Known Issues for the Intel® Atom™ Processor C2000 Product Family

Table 3 lists known issues for the Intel® Atom™ Processor C2000 Product Family.

**Table 3. Known Issues**

<b>Title</b>	Certain boards exhibit intermittent boot and MCE errors.
<b>Problem</b>	Boards with DDR trace lengths longer than the CRBs, see MCE Errors at 1333/1600 MT.
<b>Workaround</b>	Set PcdEnableRelaxedTurnaroundTiming to Enabled in order to enable the relaxed DDR Turnaround timing.
<b>Impact of Workaround</b>	Enabling this PCD will cause ~1% performance loss on the platform.
<b>Title</b>	FSP disables the TCO Watchdog Timer after the boot loader re-enables the WDT.
<b>Problem</b>	There is a coverage gap for boot loaders that utilize the WDT to address system hangs.
<b>Workaround</b>	Set the PcdTcoEnable to 1 in order for FSP to bypass disabling the WDT.
<b>Impact of Workaround</b>	None.
<b>Title</b>	Reboot occurring when PUNIT watchdog timer times out.
<b>Problem</b>	The PUNIT has a watchdog timer that provides a window of approximately 1 second to complete initial programming of power management related registers. Failure to feedback the status to the PUNIT within 1 second of a microcode update will result in the system requesting a reboot.
<b>Workaround</b>	The boot loader must ensure that FspInitEntry API is called within one second of returning from TempRamInitEntry API. For designs that do not use an RTC battery, it is recommended that the RtcPowerFailureHandler() routine should be executed after the call to FspInitEntry API to ensure that the 1 second PUNIT timeout window is not violated.
<b>Impact of Workaround</b>	None.

## 3.2 Resolved Issues for the Intel® Atom™ Processor C2000 Product Family

**Table 4. Resolved Software-Related Issues**

<b>Title</b>	USB 2.0 device may not be detected at system power-on.
<b>Problem</b>	Certain internal conditions may cause one or more USB ports to fail at system power-on.
<b>Implication</b>	When this erratum occurs, a USB device attached to the affected port will not function. In addition, the OS may report problems with the USB port.
<b>Title</b>	USB devices not being detected in certain configuration
<b>Workaround</b>	<p>Enabling workaround in early stage and using sideband transaction to program WA for USB Lane 0 to USB Lane 3.            USB_IP Port ID: 0xA4, write command: 0x7</p> <p>Register: 0x4113 (Lane 0), 0x4123 (Lan0_Pull_down)            0x4213 (Lane 1), 0x4223 (Lan1_Pull_down)            0x4313 (Lane 2), 0x4323 (Lan2_Pull_down)            0x4413 (Lane 3), 0x4423 (Lan3_Pull_down)</p> <p>For Lane 0 and Lan0_Pull_down, Repeat steps for Lan1 and Lan3.</p> <p>Step1. Offset: 0x4113=0x08            Step2. Offset: 0x4123=0x7F13            Step3. Offset: 0x4123=0x13            Step4. Offset: 0x4123=0x4011            Step5. Offset: 0x4113=0</p>
<b>Implication</b>	None

§ §

## 4.0 Related Documentation, Tools, and Packages

Table 5 lists Intel® FSP for Intel® Atom™ Processor C2000 Product Family Platform documentation.

§ §

## 5.0 Where to Find the Release

This package can be found on [www.intel.com/fsp](http://www.intel.com/fsp).

### 5.1 How to Install this Release

This release can be installed on a Linux\* system using the following:

Download the Linux\* files from <https://github.com/IntelFsp/FSP>

**Note:** For the guide to adding the Intel® FSP APIs into the boot loader code, refer to the *Intel® Atom™ Processor C2000 Product FSP Integration Guide*. (See [Section 4.0, “Related Documentation, Tools, and Packages” on page 10.](#))

**Note:** For the guide to compiling the boot loader together with the Intel® FSP binary, refer to the *Intel® Atom™ Processor C2000 Product Family Custom Reference Board Platform Guide*. (See [Section 4.0, “Related Documentation, Tools, and Packages” on page 10.](#))

### 5.2 Microcode Update

Since the introduction of the Intel® Pentium® Pro processor, IA-32 processors have had the capability to correct specific errata through the loading of an Intel-supplied data block. This data block is referred to as a microcode update or system configuration data.

Each unique processor stepping/package combination has an associated microcode update that, when applied, constitutes a supported processor (that is, Specified Processor = Processor Stepping + Microcode Update). The proper microcode update must be loaded on each processor in a system. The proper microcode update is defined as the latest microcode update available from Intel for a given family, model, and stepping of the processor. Any processor that does not have the correct microcode update loaded is considered to be operating out of specification.

The microcode update included in this release is the latest update at this particular time. Intel recommends that future microcode updates are done as soon as the latest ones are released.

**Note:** Intel recommends subscribing to the *Intel Atom® Processor C2000 Product Family for Microserver and Communications Infrastructure Platforms (Edisonville/Rangeley) - Message of the Week (MoW)* (see [Section 4.0, “Related Documentation, Tools, and Packages” on page 10](#)) for latest news on Processor Microcode Updates.

The steps for updating the microcode for a sample boot loader can be found under “Microcode Update” in the *Intel Atom® Processor C2000 Product Family Custom Reference Board Platform Guide*. (See [Section 4.0, “Related Documentation, Tools, and Packages” on page 10.](#))

### 5.3 Debug

Debug messages are the primary way of debugging the Intel® FSP. This requires enabling the debug messages into the serial port. The steps to enable the serial debug messages can be found in *How to Enable Serial Debug Messages in the Intel Atom® Processor C2000 Product Family Custom Reference Board Platform Guide*. (See [Section 4.0, “Related Documentation, Tools, and Packages” on page 10.](#))

## 5.4 Validation

The Rank Margining Tool (RMT) can flag areas of concern for platform developers. The steps to enable RMT is described in detail under “How to Enable the Rank Margining Tool” in the *Intel® Atom™ Processor C2000 Product Family Custom Reference Board Platform Guide*. (See [Section 4.0, “Related Documentation, Tools, and Packages”](#) on page 10.)

§ §

## 6.0 Release Content

This release package contains the following:

**Table 6. Package Contents**

Description	Filename	Path
FSP Kit License File	FSP Kit Production RULAC click-through License.pdf	RANGELEY_FSP_KIT
FSP Binary File	RangeleyFsp.fd	RANGELEY_FSP_KIT/FSP
Boot Setting File (BSF)	RangeleyFsp.bsf	RANGELEY_FSP_KIT/FSP
Text file copy of FSP kit license file (Linux* only)	license.txt	RANGELEY_FSP_KIT/DOCUMENTATION
*.h	FSP header files	RANGELEY_FSP_KIT/FSP/include
*.c	FSP source files	RANGELEY_FSP_KIT/FSP/srx

§ §

## 7.0 Hardware and Software Compatibility

### 7.1 Supported Hardware

The FSP included in this release is specifically targeted for the Intel Atom® Processor C2000 Product Family System on a Chip (SoC).

### 7.2 Supported Operating Systems

This release installs on either a Windows\* or a Linux\* system. However, the FSP binary itself can be used with any software development environment to generate a complete boot loader solution.

The software in this release has been validated against the operating systems given in the following table on the Customer Reference Boards (CRBs) for the following products:

- Intel Atom® Processor C2000 Product Family

**Note:** While the Intel® Firmware Support Package is validated on Coreboot\* and Yocto\* on the respective platforms, it is designed to work without change on some other boot loaders and operating systems.

**Table 7. Operating System/Boot Loader/Tools Support**

Software Type	Name	Version
Boot loader	Coreboot	4.3
Payload Boot loader	u-boot Payload	u-boot-2013.01.01
Firmware Component	FSP	Gold 006
Operating System	Yocto*	Poky* 9.0 (Yocto Project* 1.4 Reference Distro) 1.4.1
Tool	Binary Configuration Tool	3.2.0

**Note:** Validation done on C0 Stepping Intel Atom® C2000 Product Family.

§ §

## 8.0 Configuration

A Binary Configuration Tool (BCT) for the Intel® FSP is provided as a companion tool and is intended to be used to do the following:

- Customize the FSP binary configuration options based on the Boot Setting File (BSF).
- Rebase the FSP binary to a different base address. (The default base address of the Intel® FSP for Intel Atom® Processor C2000 Product Family is 0xFFF80000.)

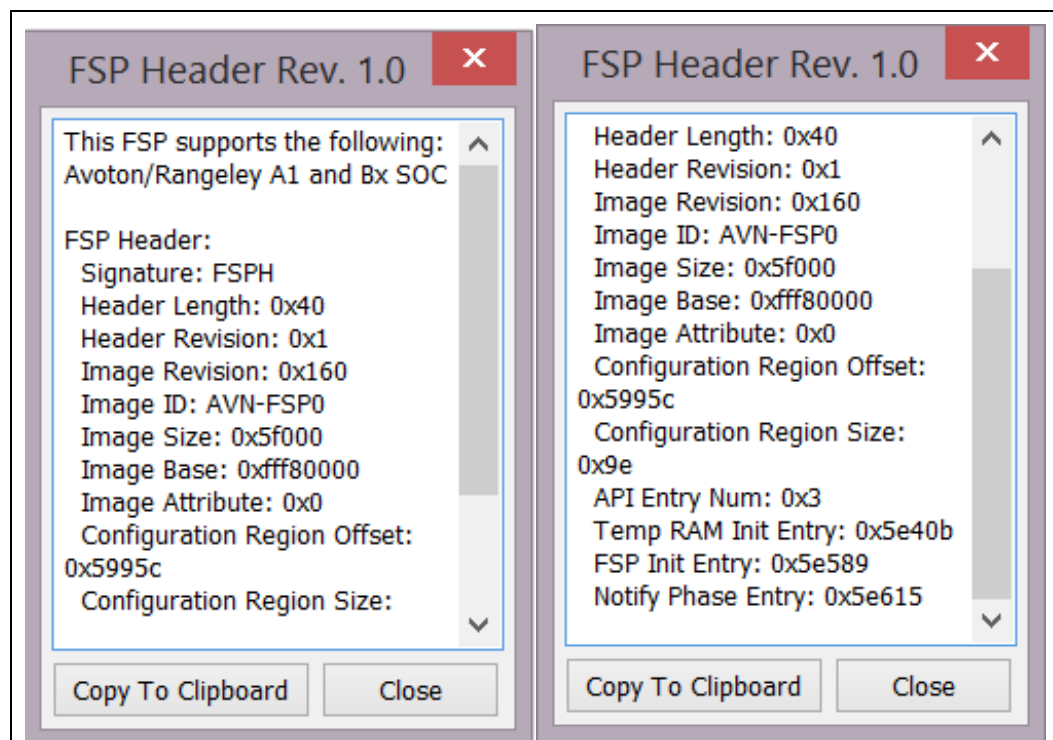

Refer to the BCT User Guide for the usage instructions. See [Section 4.0 “Related Documentation, Tools, and Packages”](#) to obtain the BCT.

### 8.1 Intel® Firmware Support Package Information

To obtain the Intel® FSP binary information:

1. Run the Binary Configuration Tool as an Administrator.
2. Click the Show Binary Description command button.
3. Select the Intel® FSP binary. For this release, the binary included is named as RangeleyFsp.fd.
4. Click Open. Another window, shown in [Figure 1](#), will pop out to show the Intel® FSP binary information.
5. Click OK to close the window.

**Figure 1. Intel® FSP Binary Information**

§ §
